

Systems Support (SYS)

[Expand all](#) [Collapse all](#)

Overview and Director

The **Systems Support (SYS)** group is made up of several Systems Administrators. These administrators provide internal support for the University's servers, installing and maintaining the operating system and applications software for each server, including VDI and the High Performance Computing (HPC) cluster. They also identify and resolve system-related hardware and software problems. Administrators are responsible for performance monitoring and tuning, configuration, resource use, account authorization and security monitoring.

Systems Administrators Systems Administration

The **Systems Administrators** of Tennessee Tech are:
